Cybersecurity

Advisory
Strengthen cybersecurity with Advisory Services

Customized programs designed to enhance organizational cybersecurity posture for connectable technologies, UL's advisory services help companies with education support to navigate the vast landscape of best practices and standards, assess cybersecurity objectives and processes, qualify risk and expand the internal knowledge base to address cybersecurity in product development.

Advisory Services

Gap Assessment
A workshop with technology teams to assess an organization's products or its process alignment with an industry best practice or standard. The workshop process identifies areas for improvement and compliance, including:
- Scoping of products & systems and their applicable security requirements
- Readiness for potential cybersecurity certification

Training
Customized instructor-led training to fit an organization's cybersecurity educational needs. Support and educate team members on wide-ranging areas including:
- Good design practices
- Threat analysis
- Risk management
- Cybersecurity testing
- Applicable standards and best practices

Secure Development Lifecycle (SDL)
Including cybersecurity into the design, testing and maintenance of an organization's product lifecycle can help promote good cybersecurity in products and systems. UL can support these initiatives through customized support on training, building and assessing an organization's SDL, including:
- Security requirements, program and policy review
- Threat analysis with modeling
- Secure software design
- Coding standards and code analysis
- Risk management
- Penetration testing

Organizational and Process Security Assessment
Including cybersecurity requirements into organizational policies, procedures, and supplier agreements can help promote good cybersecurity throughout an organization and supply chain. UL can support these initiatives through customized support on training, building and assessing an organization's security policies and procedures, including:
- Organizational policy and procedures review
- Supply chain policy review
- Business risk management

UL Cybersecurity Assurance Program (CAP)

Based on the UL 2900 Series of Standards and other industry standards, UL's Cybersecurity Assurance Program (CAP) includes a wide range of service offerings within the following categories:

ADVISORY   TESTING   CERTIFICATION
