

## Achieving Points toward Sustainable Codes and Rating Systems

GREENGUARD Certification programs are recognized and referenced in numerous building programs, standards and specifications.

### ASHRAE 189.1

A comprehensive, sustainable building standard addressing resource reduction, site sustainability, indoor environmental quality and building’s impact on atmosphere.

### CALGreen

California’s stringent building code, which requires new buildings and renovations to meet a certain baseline of efficiency and sustainability standards.

### International Green Construction Code (IgCC)

Designed to be a mandatory baseline building code that addresses green commercial construction and provides a framework linking sustainability with safety and performance.

### CHPS Criteria for High Performance Schools (Volume III)

The nation’s first green building rating system designed especially for K-12 schools to help them achieve high performance design, construction and operation.

### Green Globes

A building design and management tool including an online assessment, rating system and guidance for green design and operations.

### NAHB National Green Building Standard (ICC 700-2008)

An ANSI standard to establish practices for the sustainable design and construction of green residential building, building sites, subdivisions and renovations.
