

Interoperability for a smarter, more connected world

Real-World Smart Home Device Testing

Empowering Trust™

Keeping consumers connected with their smart products.

As the age of convenience continues to grow, so does the demand for connectivity. When technology can help “link” things together, fix problems before they arise and automate our most mundane tasks, life becomes a lot less hectic. However, smart home products are becoming increasingly complex with more added features, and interoperability testing has become more important than ever. UL helps protect your company’s brand and mitigate the challenges consumers often experience.

Leverage our testing expertise to identify problems so we can help you:

- Improve consumer out-of-box-experience
- Improve product and mobile APP reviews
- Minimize calls into customer support
- Reduce product returns
- Deliver quality and performance
- Help drive increased sales
- Protect brand reputation

Get connected, stay connected, and deliver on intended features with our end-to-end smart device testing solutions.

Smart Home Device Testing:

- Wireless interoperability and quality testing
- Mobile app testing
- Reliability testing
- Usability and functional testing
- Video and syslog capturing tools
- Feature performance testing
- Phone and Android compatibility testing
- Router compatibility testing
