Solutions for Medium & High Voltage Cables

The wire and cable division formally launched its programs to help utilities with supplier audits and product inspections of their medium voltage cable suppliers in 2017. These cables are critical to the electricity delivery network for utilities, but many now lack the knowledge and manpower to perform these services themselves. UL, with these new services, is prepared to meet industry needs.

Reliable Solutions for Robotics Applications

The reliability of machines using robotic components has increasingly become a major concern due to the growing complexity of the motions used to complete production and warehousing tasks. However, evaluating the reliability of robotic cables has not followed suit. The cables are a vital part of any well-functioning robot but are an afterthought in most designs.

First UL 3992 Performance Verification Helps Address Industry Concerns About Degrading Performance Issues Associated With Patch Cords

Patch cords are considered by the industry as the weakest element in a communications cabling system due to the variance in patch cord performance, resulting from inferior or sub-standard connectors, materials, cable assembly or manufacturing process. Yet, the performance of a patch cord is crucial to a computer network's speed and performance.
