

What makes us different?

UL's Lightning Protection Systems (LPS) inspection offering provides all of this.
Can your LPS inspection company say the same?

Nationally Recognized Testing Laboratory (NRTL)

We are an independent laboratory recognized by the Occupational Safety and Health Administration (OSHA) to test products to applicable safety standards.

Accredited by International Accreditation Service (IAS)

This international, third-party accreditation verifies that UL's inspection process is independent, thorough and performed by highly skilled technical experts. We are the only provider to achieve IAS accreditation for inspection of an installed LPS.

Master Label Certificate provider

We offer our Master Label Certificate (MLC) for any published lightning protection system standard, including various military standards and international standards, applicable to installation sites or building owner requirements. Upon successful completion, we issue an MLC valid for five years. Your MLC will be listed on UL.com/lightningcertificate.

Trade-organization independent

Our inspection program is independent and not overseen by trade organizations or insurance companies. In addition, UL does not use sub-contractors to fulfill our inspections.

Safety standard expertise

Underwriters Laboratories, our nonprofit affiliate, is a standards writing organization and has published nearly 1,500 standards that are the ANSI/North American standard for product safety.

Learn more at
www.UL.com/lightning.

We can help you determine if your lightning protection system was installed properly and complies with current requirements, including UL 96A and NFPA 780.
