

UL's Virtual Guided Audit™ (VGA) and remediation services for responsible sourcing

UL's Virtual Guided Audit™ (VGA) and remediation services for responsible sourcing provide businesses and facilities with an impactful alternative to traditional, in-person audit programs. A VGA offers you opportunities to assess your facility's social and environmental responsibility and supply chain security, as well as brand and image protection without the need for an auditor to visit the location. With your participation throughout the audit, these virtual assessments become an immersive experience.

Moreover, the remediation services help your company improve social-responsibility performance by assisting management to improve overall performance related to responsible sourcing. We help you identify the root causes behind audit findings and building systems to prevent problems from reoccurring.

VGA and remediation services for responsible sourcing are:

Remote

Immediate

Tangible

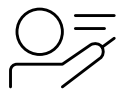

Analytical

How it works

A qualified and experienced auditor will guide you through the assessment from start to finish via livestream on a mobile device, evaluate critical operational challenges, coach staff on areas of improvement and promptly issue a report with immediate feedback.

Benefits

Educational

Informative

Flexible

Partnership

VGA and remediation services can be conducted based on specific laws and regulations, as well as relevant international and industry standards and company code of conduct.

UL works with manufacturers, brands and retailers to provide tailored solutions to address responsible sourcing challenges across a variety of industries and regions.

To learn more about VGA and remediation services, contact your local UL representative at rsinfo@ul.com or visit [CRS.UL.com](https://www.crs.ul.com).
