

Build
confidence
in your
supply
chain's
data with
UL's PATH®
SmartSuite
Analytics

In today's fast paced world, companies struggle to collect and compile supply chain data in one place for various different products. This leads to time-consuming data cleanup, lack of visibility into your suppliers' operations and a failure to identify recurring patterns in your current process.

UL's PATH® SmartSuite Analytics gives you full visibility into your supply chain to ensure compliance in all of your products. We help you understand where the gaps are with current suppliers and why they may be failing to meet their obligations. Our solution provides insights into your testing, inspections, and audits for immediate access to critical data and information for effective day-to-day management of multi-stage product development life cycles and strategic business decisions.

Benefits

Time savings – Analysis of data will help you identify things that aren't working in your current system so that corrective actions can be implemented to address them.

Cost reduction – Locate areas where too much is being spent on low risk products or suppliers.

Trends analysis and better decision making – PATH® SmartSuite Analytics solution provides insight into the performance of your program. Strong analysis of reports can be used to make informed decisions around products, countries, and suppliers.

Gain insights into your testing, inspections, and audits

- Vendor ranking by report
- Vendor results by product, seasons and more
- Compare vendor performance
- New Scorecard for vendor risk assessment
- Top failures
- Total Pass/fail over time
- Map of high risk regions
- Pass/fail rates by product category

UL's PATH® SmartSuite Analytics is among our comprehensive digital solution offerings designed around managing your business. We help ensure trust in your data and offer insight into your current processes.

PATH® SmartSuite full digital solution offerings

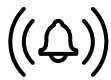

Create and manage your orders and access up-to-date statuses of your projects.

Use intelligent data analytics to uncover risks in your supply chain, viewable through a performance dashboard, vendor scorecard and failure analysis.

Receive up-to-date product regulatory requirements through our global information database.

Track failures, violations and defects found through real-time communication and collaboration throughout your supply chain.

Access all your reports and documentation in one centralized repository to manage your critical information.
