

UL's Turbo Carbon™ software  
simplifies carbon emissions reporting.

SIMPLE, FAST, AFFORDABLE

## Turbo Carbon empowers businesses to measure and manage their carbon emissions.

Carbon reporting is increasingly a must do. Whether your company needs to comply with mandatory reporting, submit carbon data to customers, or measure progress against your own carbon goals, reporting provides many benefits for your business, including:

- **Reduced risk of non-compliance**
- **Preferred vendor status with your customers**
- **More control over your carbon reduction strategy**

UL's carbon reporting software is easy to use, multilingual and globally available. It makes carbon reporting efficient and cost effective across all kinds of business.

Having provided sustainability reporting services to customers for more than a decade, UL understands the challenges required to deliver comprehensive, accurate CO2 reporting.

This understanding is embedded into UL's carbon reporting software tool, making it a one-stop digital resource for carbon reporting. Key features include:

- **In-tool training**
- **Guided data collection**
- **Automated CO2 calculation**
- **On-demand, UL-issued CO2 report**
- **Add-on services**

UL's Turbo Carbon software empowers your business with the capabilities to provide critical carbon emissions data and generate detailed reports for a range of audiences and submission requirements.

## Big benefits to businesses

UL understand the growing need for companies to access cost effective, efficient sustainability data and reporting. UL's Turbo Carbon software makes reporting **accessible, easy, and cost effective**.

- Comply with carbon reporting requirements and gain access to numerous secondary advantages such as preferable financing from investors that require sustainability data as part of their evaluation.
- Achieve possible preferred vendor status from buyers seeking to purchase products from businesses that have demonstrated their commitment to sustainability.

In a world where consumers are more aware and active than ever, businesses that demonstrate care and control over their carbon footprint can protect public acceptance and brand equity among consumers who are looking to address the climate crisis through responsible consumption.
