

# UL's Lighting Limited Production Program

Supporting small and low volume lighting manufacturers to help bring their products to market easily and with cost effectiveness.

## Learn more about the Limited Production program for lighting.

Understanding the unique challenges for small- and low-volume manufacturers, UL has created the limited production program for lighting to better align with small-scale production models and minimize costs associated with certification.

Limited production manufacturers also benefit from reduced costs and streamlined services that are tailored to their unique needs. Upon successful completion of the Limited Production investigation, UL coordinates one visit for inspection by a UL representative and witness of the application of the UL Mark to your product.

The program also offers a cost efficient convertible option to accommodate sustained production needs.

The process is as simple as 1, 2, 3.

1. Complete all administrative documentation, and agree upon a scope of work
2. Evaluate the products compliance to the applicable requirements
3. Apply the labels to the products which are included as part of the limited production run

By leveraging the collective experience of UL's more than 12,000 employees during product development, you can streamline your overall compliance process. Throughout UL's 170 global laboratory and testing facilities, UL engineers help you seamlessly meet compliance requirements in all the markets you want to reach. With UL as your certifier, you have access to UL's full portfolio of services including:

- North American Safety Certification
- Global Market Safety Certification
- Photometric Testing
- Performance Testing

## WHY UL?

Small or custom production runs have a path to certification with UL. At UL, the global leader in safety science, testing and inspection, we help manufacturers of all sizes navigate the complex network of certification to gain quick and easy access to markets where they desire to sell.

- The Limited Production program is simple, fast, and cost effective.
- We offer outstanding customer service with experienced engineers to guide customers through the process, with unmatched access to our technical expertise.
- UL is a knowledgeable and reliable partner for core compliance and market access.
