

# Gain greater visibility and control for your testing, inspections and audits with UL's PATH® SmartSuite Full Digital Solution

In today's fast-paced world, retailers, brands and manufacturers struggle to collect and compile supply chain data in one place for various products. This leads to time-consuming data cleanup, lack of visibility into your suppliers' operations and a failure to identify recurring patterns in your current process.

UL's PATH® SmartSuite full digital solution is a web-based application that delivers powerful digital technology solutions, empowering greater visibility and control of your testing, inspections and audits as well as uncovering potential risks within your supply chain.

Our suite of tools and resources will help you navigate through supply chain complexities, providing access to project order management, business intelligence, corrective actions, information management and product regulations.

## Benefits:

Save time – Visibility into all of your projects in one place with the capability of real-time communication and collaboration.

Reduce cost – Locate areas where too much is being spent on low-risk products or suppliers.

UL's PATH® SmartSuite Analytics solution provides insight into your program's performance. Strong analysis of reports can be used to make informed decisions around products, countries and suppliers.

## Manage your supply chain's data

- Up-to-date project status
- Real-time communication and collaboration
- Access to vendor results
- Various reporting capabilities
- Supply chain dashboard
- Pass/fail rates by product category
- Compare vendor performance

UL's PATH® SmartSuite is your full digital solution designed to manage your supply chain and business. We help you trust your data, provide visibility into your projects and offer insight into your current processes.

### UL's PATH® SmartSuite includes:

Life cycle management – Create and manage your orders electronically and access up-to-date project statuses.

Information management – Greater visibility into your business-critical documents. Receive up-to-date product regulatory requirements through our global information database.

Corrective action – Track failures, violations and defects found through real-time communication and collaboration throughout your supply chain.

Analytics – Use intelligent data analytics to uncover risks in your supply chain, viewable through a performance dashboard, vendor scorecard and failure analysis. Access all your reports and documentation in one centralized repository to manage your most critical information.
