

How to certify your cord tag label to UL 969A

Let us help you get your cord tags, flag labels, flag tags and wrap-around labels certified to the latest UL Solutions Standard.

If you currently have products recognized under the marking and labeling category PGIS2, our engineers will review your existing certifications to determine if your products can be covered without testing or limited testing due to similar requirements.

Throughout the course of your project, we provide secure online access to your project status through our customer portal.

1
Connect with the UL Solutions sales team to help review your request details.

2
You will work directly with a UL Solutions engineer who will craft and execute a customized plan by coordinating the sample requirements and testing arrangements needed for you to comply with UL 969A.

3
Once your product is certified (recognized), it will appear online in the **UL Product iQ®** database under a new category PGCT2 (U.S.) and/or PGCT8 (Canada). This searchable certification directory will make it easy for end users to find your compliant cord tag labels.
