

Turbo Buildings

Sustainability management software

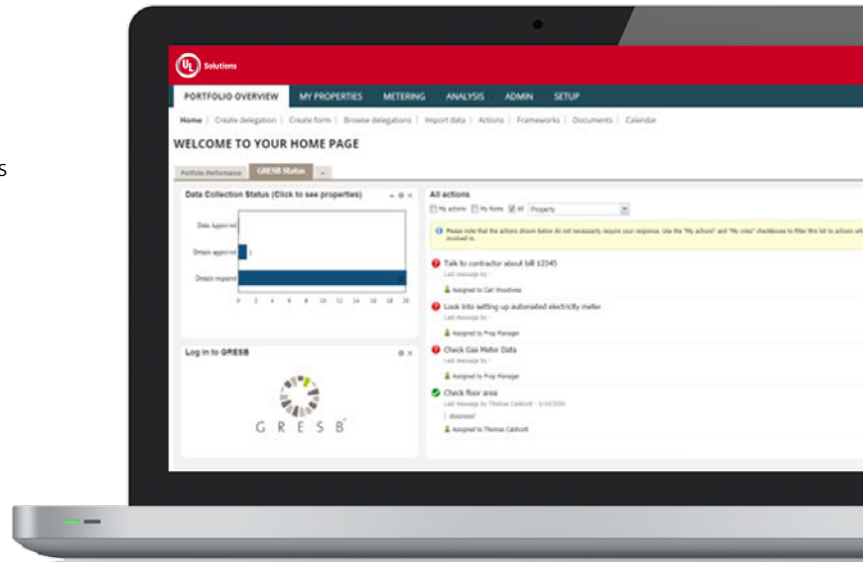

Maintaining a large property portfolio can present significant challenges in keeping information up-to-date.

Easily view, collect, manage and disclose your buildings related **ESG data** to stakeholders, including **GRESB** and the investment community.

Executive dashboards designed for property managers combined with automated reports sent straight to your users based on their role and location.

Put configuration and scalability in your hands through the power of 360 established enterprise software.

UL Solutions' Services for healthy buildings advisory team can assist with change management, training, building performance and optimization.

KEY BENEFITS AND FEATURES

- **Executive views** – dashboards and reports designed for property managers
- **Action management** – stay ahead on tasks and action items
- **Trust in data** – qualitative checks prevent user error
- **Clear audit trail** – provides accountability for data quality and makes audit quick and easy
- **Automated GHG calculations** – accredited by CDP for scopes 1, 2 and 3
- **Document Management** – upload site documents, e.g. tenancy agreements and certificates
- **Flexible tools** – put system expansion in your hands
