

Limited Production Certification Program

**A UL Solutions
customized offering
for manufacturers
with limited production
for their energy
storage system (ESS)
installation.**

Created to meet your needs

Are you a manufacturer or integrator who needs to certify a limited quantity of energy storage systems? Perhaps you need to certify a custom-built ESS?

UL Solutions Limited Production Certification program gives manufacturers the opportunity to ship a limited quantity of UL Certified products without initiating UL Solutions Follow-Up Services, which includes ongoing inspections and annual fees.

The Limited Production Certification fits well between UL Solutions other service offerings, such as our Listing program and Field Evaluations. All requirements of the Listing program are applied and a dedicated label, which includes a UL Mark and unique serial number, will be created and attached to the product.

How it works

The Limited Production Certification is applicable to a limited batch of production systems in a limited timeframe. The construction review and evaluation can be done at UL Solutions or a client's facility. Any necessary testing may be conducted at UL Solutions, a client's facility or the installation site (depending on the test).

When the product certification is complete, UL Solutions representatives will confirm the entire batch of samples meet the requirements of the standard, and will witness the UL Mark being applied to the whole batch.

Benefits

- Perfect fit for customized equipment
- No inspections or annual fees
- Satisfies certification requirements when requested by local authorities
- No need to specify the final installation site if unknown

Service	Evaluation	Characteristics	Requirements	Result	UL Solutions Follow-Up Services
Listing or full certification program	At factory or at suitable laboratory	If product does not change, listing is ongoing, and cost spread across many units. Suitable for ongoing production of the same product for long periods of time. May be modified to include changes and include multiple variations.	As defined by Guide Cards and compliance to applicable standard	UL Listed Mark	Yes
Limited production certification	At factory or at suitable laboratory	Providing a UL Mark at the factory/site on a limited number of units without establishing a follow-up service for ongoing inspections at the factory. All construction requirements and testing described by the appropriate standard shall be applied, including eventual destructive testing.	As defined by Guide Cards and compliance to applicable standard	UL Listed Mark with unique serial number	No
Field Evaluation	At factory, distribution point, or elsewhere in supply chain. For U.S., final evaluation is normally at the final installation site.	Strong collaboration with local code authorities. Flexibility in requirements. Evaluation is equipment-specific and site-specific and requirements are tailored to site location and actual application.	Flexible, while base standard is referenced, final requirement may use applicable parts from other standards.	UL Field Evaluated Product Mark	No
