UL 360 Data Management Software

ESG | Sustainability | Supply Chain

UL Solutions

Comprehensive software for a complicated world

Meet internal and external expectations with robust software that lets you seamlessly track, manage and report your sustainability practices from one powerful solution.

Collect
Import historic data and delegate regular data entry

Draft
Use flexible tools to organize and customize your report

Publish
Communicate results to confirm compliance with disclosure organizations

Our solution

UL 360 Data Management Software for ESG, Sustainability and Supply Chain Management makes it easy to collect reliable data across your whole organization, whether you collect the data centrally or delegate it worldwide. We help companies gather and analyze data for their annual CSR/Sustainability reports and meet a range of external requirements including CSRD, SFDR, SECR and SBTi. In addition to automating reporting, UL 360 gives you the data you need to create and track new sustainability initiatives in your organization.

Key features and benefits

- Simple online forms help ensure incidents are logged consistently
- Consolidate information for ongoing performance management, external disclosure and strategic decision making
- Report to frameworks such as CDP, GRI, DJSI, SASB, and UN Global Compact
- Intuitive and user-friendly system to simplify data collection
- Quality checks on data to ensure you are getting reliable information
- A full audit trail to help support external assurance for your reporting
- Flexible reporting tools like customizable charts, tables and dashboards
- Real time meter reading and management
- ENERGY STAR®, Urjanet and GRESB integration

UL 360 Reporting Software

Align your reporting with leading ESG and sustainability frameworks

A closer look at UL 360

How do I collect the information?

- Integrate with existing systems or even pull data straight from your energy suppliers, streamlining and automating data collection wherever possible
- Delegate online forms and collect data with approval steps
- Import data from Microsoft (MS) Excel
- Keep a full audit trail in the system to help make third party assurance more robust and less complicated

What reporting and management tools will I get?

- "Drag and drop" chart builder (with your colors and fonts applied by default)
- Excel exports to get large amounts of data out of the system
- PDF and MS Word report templates
- Dashboard views of performance against targets
- Scorecard view to distill complex performance data into simplified traffic light overviews
- Interactive maps to view information spatially

How do I communicate performance?

Corporate responsibility is about more than collecting and holding data; it's about sharing it with your stakeholders in a transparent manner. We take our customers beyond the first hurdle of data collection and give them tools to support their reporting:

- Export print quality, branded images
- Configure and share dashboard views with your users
- Automatically export charts directly to your intranet or corporate website
- Integrate our dashboards, mapping tools and more with your website
